LIGHTING

LIGHTING

We don't begin with finished metalwork. We begin with molten metal.

THE FOUNDRY

At Jonathan Charles, lighting begins in our own foundry. Brass is melted and cast in house, giving us control over the form, detail and finish from the very beginning.

Our induction furnaces hold up to three hundred kilos of molten metal. We use sand casting, flask casting and lost wax casting, selecting each technique according to the scale and intricacy of the form.

Our pattern library holds more than 18,000 hardware designs created over two decades of furniture making. Today, those patterns continue to inform new designs across the collection.

Today, that archive of forms and craftsmanship provides a foundation for our lighting collection.

“From drawer pulls to chandeliers, the craft remains the same.”

From casting brass and working iron to hand applied gold leaf and finished shades, our lighting draws on the same workshops and craftspeople as our furniture.

The materials, proportions and finishes are all considered for the way they shape the light.

Everything else is designed to shape it, from the proportion of an arm and the placement of a shade to the depth and character of the finish.

LIGHTING THAT BELONGS WITH THE FURNITURE

A lamp column is turned with the same techniques we use to shape a bedpost, only at a smaller scale.

The Tamarisk lamp is turned on the same lathes as the Tamarisk bed, by the same furniture craftsmen. Both were designed together from the start.

The result is lighting that belongs naturally alongside our furniture, not simply in proportion and finish, but in the way the materials develop character over time.

A ROOM CHANGES WITH THE LIGHT

By day, natural light defines a room, revealing grain, silhouette and architectural detail. After dark, lighting takes on that role.

As daylight fades, the character of the room changes.

The placement and quality of light influence how a room is experienced after dark: its proportions, its surfaces, its atmosphere and the way people gather within it.

Lighting becomes part of the architecture of the room.

Yet lighting is often considered only after the rest of the room is in place.

“By day, natural light defines the room. After dark, the lighting we choose does.”
